Moosa Junad

Software Developer / Systems & Full Stack

Addu City, Maldives · +960 7835181
junaadh.02@gmail.com · junaadh.dev · github.com/junaadh

Software developer working across systems, backend services, and user-facing applications. Interested in what happens beneath the abstraction: memory, runtimes, protocols, and the infrastructure that makes software dependable.

EXPERIENCE

SME Digital

June 2026 - Present

Software Developer

- Develop and maintain full-stack business applications using TypeScript, React, and relational databases.
- Implement API integrations, data validation, and configurable workflows across customer-facing and internal applications.
- Improve access controls, database tooling, and development workflows while maintaining existing services.

Alva Productions

September 2025 - January 2026

Software Engineer Intern

- Developed and refactored SwiftUI applications with SwiftData and CloudKit integration.
- Improved Flutter application responsiveness and maintained applications integrating Swift and Flutter components.

Dhiraagu

April 2022 - December 2022

Customer Support Specialist

Customer support in telecommunications.

EDUCATION

Taylor's University

January 2023 - January 2026

Bachelor of Computer Science (Honors)

Cyber Security major; Artificial Intelligence extension. CGPA: 3.42.

Languages English · Dhivehi

Projects & technical toolkit

Personal projects spanning systems programming, application development, and deployment infrastructure.

SELECTED PROJECTS

Corex

Rust / Swift / Compilers

- Developed a modular compiler toolchain in Rust and Swift, designed around pluggable backend targets.

github.com/junaadh/corex

Aegis

Rust / PostgreSQL / TypeScript

- Built a modular Rust authentication platform with WebAuthn passkeys, TOTP MFA, sessions, and role-based access control.
- Integrated PostgreSQL, Redis, an asynchronous email outbox, and a TypeScript SDK; automated checks with GitHub Actions.

github.com/junaadh/aegis

Web Server

AArch64 / Assembly / TCP

- Implemented a TCP server in AArch64 assembly, exploring low-level networking and system interfaces.

github.com/junaadh/WebServer

Bloom Light

Next.js / Docker / Cloudflare

- Delivered an e-commerce storefront and admin dashboard with containerized infrastructure, PostgreSQL, and object storage.
- Automated deployments with GitHub Actions and configured private networking, reverse proxying, and TLS.

TECHNICAL TOOLKIT

Systems

Rust · C / C++ · Zig · AArch64 assembly

Full stack

TypeScript / JavaScript · React / Next.js / Remix · Axum / Hono · PostgreSQL / Redis

Native

Swift / SwiftUI · SwiftData / CloudKit · UIKit · Flutter

Infrastructure

Docker / Linux · GitHub Actions · Cloudflare / Caddy · Prometheus / Grafana / Loki
